

Vendor Questions and Responses

RFP 2003-20R

Set #1

Question:

When considering future capacity requirements (150%, 175% and 200%), it is possible that the total processor count will exceed 42. Costs associated with software for these configurations appear to be ignored using the proposed evaluation model. Is this accurate?

Ans:

In the evaluation model we are reviewing the proposed solutions that meet the 125% requirement. The future capacity requirements are for information purposes, and may or may not occur. We would be cognizant of additional software requirements should we ever feel compelled to increase our capacity.
